PREPARATION AND FEEDING

The suggested procedure for preparing stock solutions of CLARIFLOC C-511 consists of adding about one-half of the water required to make a full batch (or at least enough to cover the blades of the mixing device), adding the required amount of CLARIFLOC C-511 while stirring, adding the balance of the water and stirring until dissolution of the polymer is complete (about 15 minutes). The recommended solution strength at this stage is a 5-10% by weight. Overmixing the polymer solution can cause degradation of the molecular weight and loss of performance. The diluted product should be used within 8 hours. For clarification, thickening and flotation applications, a secondary dilution is recommended. There are also a number of commercially available systems for a one step in-line dilution of the product to any convenient concentration.

TYPICAL DOSAGES

Clarification	5-50 mg/l
Flotation	10-200 mg/l
Thickening	10-100 lbs/ton
Dewatering	50-500 lbs/ton

MATERIALS OF CONSTRUCTION

Cross-linked polyethylene, fiberglass, stainless steel or lined steel are the preferred materials of construction for bulk tanks. Unlined mild steel, black iron, galvanized steel, copper or brass are not recommended in any part of the feed system. Stainless steel, Viton or Teflon are the best choices for pump heads. For feed lines, use PVC or reinforced Tygon tubing.
